## PROFILE SUMMARY

Data Analyst / Data Engineer with 1 year of professional experience and a Microsoft Certified Azure Databricks Data Engineer Associate. Uses SQL (window functions, query performance tuning), Python (Pandas, PySpark) and BI dashboards (Databricks, QuickSight) to clean, integrate and turn multi-source data into KPI reporting for business stakeholders. Experienced in data quality validation, data governance (Unity Catalog access control) and cloud data pipelines on Databricks and AWS.

## TECHNICAL SKILLS

- **Data Analysis and Reporting:** SQL, Python (Pandas, PySpark), exploratory data analysis, KPI reporting, dashboards, stakeholder reporting
- **Visualization and BI:** Databricks dashboards, Genie Spaces, Amazon QuickSight, Matplotlib, Seaborn
- **Data Quality and Governance:** data cleaning, validation, deduplication, standardization, Unity Catalog access control, auditability with Delta time travel
- **SQL and Databases:** complex joins, CTEs, window functions, aggregations, query optimization and performance tuning; PostgreSQL, MySQL, MongoDB, AWS Athena, AWS Redshift
- **Data Engineering:** ETL/ELT pipelines, data integration and consolidation, historical and incremental load, Medallion Architecture (Bronze/Silver/Gold), star schema modeling, SCD, Apache Airflow
- **Cloud and Big Data:** Databricks (Unity Catalog, Delta Lake, Workflows), Apache Spark, AWS (S3, Glue, Lambda, Athena, Redshift, RDS, EC2, IAM, QuickSight); familiar with Azure and GCP concepts
- **Tools:** Git, GitHub Actions, CI/CD, Linux, Jupyter Notebooks

## WORK EXPERIENCE

**Backend Developer (Data and APIs) | Luxmor AI Technologies Pvt Ltd** Aug 2025 - Sep 2026 | Chennai

- Delivered an MVP backend in Python with REST APIs and designed PostgreSQL and MySQL schemas, tuning queries for faster, stable performance.
- Automated data cleaning, transformation, validation and reporting with Python and SQL, cutting manual data handling and improving dataset accuracy.
- Deployed and supported the application on AWS (S3, EC2, RDS), keeping the production environment reliable.
- Resolved permission and service issues on Linux servers over SSH, speeding up fixes and keeping releases stable.
- Built CI/CD pipelines with Git and GitHub Actions, automating build, test and deployment to shorten release cycles.
- Contributed to code reviews, sprint planning and technical documentation for cross-functional teams.

## PROJECTS

**FMCG Data Engineering Pipeline** | Databricks, PySpark, Delta Lake, Unity Catalog, S3 | GitHub

- Integrated data from multiple retail companies into a unified AWS S3 lakehouse in a simulated FMCG acquisition.
- Implemented Medallion Architecture (Bronze/Silver/Gold) with Delta Lake, enabling ACID-compliant pipelines with time travel and incremental processing.
- Cleaned, validated and deduplicated data with PySpark ETL, producing consistent, high-quality datasets for downstream use.
- Modeled a star schema with fact and dimension tables and tuned Delta tables and queries for faster analytical reads.
- Optimized loading with a historical full load plus Delta incremental load, so ongoing updates process only changed data instead of full reloads.
- Strengthened governance with Unity Catalog access control, and built Databricks dashboards and Genie Spaces for natural-language reporting.

**YouTube Data Engineering Platform** | PySpark, S3, Glue, Lambda, Athena, Airflow, QuickSight | GitHub

- Designed a cloud data platform that ingests YouTube trending data from multiple sources for analysis.
- Automated ETL with AWS Glue, Lambda, PySpark and Airflow, eliminating manual pipeline runs.

- Cleaned and standardized data across sources, resolving format mismatches to produce consistent datasets.
- Built an S3 data lake with Athena for serverless SQL, optimizing query cost and scan time.
- Fixed IAM permission errors and API failures so the pipeline runs reliably end to end; delivered QuickSight dashboards for business insights.

**Spotify Data Analytics** | Python, Pandas, MySQL, SQL, REST API, Matplotlib, Seaborn | GitHub

- Built a pipeline from REST API ingestion through Pandas cleaning and MySQL schema design to SQL analysis and visualizations.
- Cleaned and deduplicated the data, handled null values, and surfaced insights on listening trends using SQL and Seaborn charts.

**Zomato AI Data Engineering Project (In Progress)** | AWS S3, Snowflake, dbt, Apache Airflow, OpenAI LLMs (RAG, Text-to-SQL)

- Building an end-to-end pipeline on a large-scale food delivery order dataset, loading raw data from AWS S3 into a Snowflake data warehouse.
- Developing dbt models across Bronze, Silver and Gold layers (facts, dimensions and data marts) with automated data quality tests, documentation and lineage.
- Orchestrating the pipeline with Apache Airflow DAGs, including the full AI workflow.
- Adding an AI layer with LLMs: review enrichment, a RAG chatbot over customer reviews, and text-to-SQL over the warehouse.

**Walmart Data Engineering Project (In Progress)** | Databricks, Airflow, dbt, AWS S3, Delta Lake

- Building an end-to-end retail pipeline on Walmart data, ingesting from an OLTP source and AWS S3 into a Databricks lakehouse with incremental ingestion.
- Developing dbt models for Silver technical and business layers, with incremental models, snapshots for slowly changing dimensions, and automated dbt tests for data quality.
- Designing a metadata-driven ingestion pipeline and a star schema, orchestrated with Airflow DAGs (run in Docker) that trigger dbt and Databricks jobs.
- Preparing sales dashboards for KPIs such as weekly sales, store and department performance.

## CERTIFICATIONS

- **Microsoft Certified: Azure Databricks Data Engineer Associate**, Microsoft (Jul 2026, Credential ID A33FDCA4239653AF)
- **Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate**, Oracle

## EDUCATION

**B.E. Computer Science and Engineering | Sri Muthukumaran Institute of Technology, Chennai**

Nov 2021 - May 2025 | **CGPA: 7.9 / 10** | HSC: 80% | SSLC: 65%

## CODING PROFILES

- **LeetCode:** leetcode.com/u/Saktheesh_A (SQL and Python problem solving)
