PROFILE SUMMARY

2025 Computer Science graduate with hands-on Data Engineering experience (Databricks, PySpark, AWS). Microsoft Certified Azure Databricks Data Engineer Associate.

TECHNICAL SKILLS

Databricks & Big Data: Databricks (Unity Catalog, Delta Lake, Workflows, Genie Spaces), Apache Spark (PySpark), Medallion Architecture (Bronze/Silver/Gold), Delta Lake (ACID, time travel, incremental processing)

Data Engineering: ETL/ELT pipeline development, historical load, incremental load, data modeling (star schema fact & dimension tables), data quality & validation, SCD

Cloud Platforms: AWS (S3, EC2, RDS, Lambda, Glue, Athena, Redshift, IAM, QuickSight); familiar with Azure and GCP concepts

Programming & SQL: Python (PySpark, OOP), SQL (complex joins, window functions, aggregations, optimization)

Databases: MySQL, PostgreSQL, MongoDB, AWS Athena, AWS Redshift — schema design, normalization, query optimization

DevOps & Tools: Git, GitHub Actions, Apache Airflow (DAGs, scheduling), Jupyter Notebooks

WORK EXPERIENCE

Python Full Stack Developer Intern | Manovate Technologies

Oct 2025 – Apr 2026 | Chennai

- Tasked with building production-ready Python web applications, owned end-to-end development using Django and Flask and designed REST APIs plus MySQL/PostgreSQL schemas, resulting in stable, production-grade data storage with optimized query performance.
- Faced with repetitive manual data processing work, wrote Python and Pandas scripts to automate transformation and validation, resulting in significantly reduced manual handling of raw datasets.
- Working within an Agile team structure, actively participated in daily standups, sprint planning, and retrospectives while maintaining technical documentation and data flow notes, resulting in clear, team-wide visibility into project progress.

PROJECTS

FMCG Data Engineering Pipeline

Databricks · PySpark · Delta Lake · Unity Catalog · AWS S3 · Medallion Architecture · Star Schema

- Tasked with simulating an FMCG retail acquisition scenario, designed and built a production-grade end-to-end data engineering pipeline on Databricks, resulting in a unified AWS S3 lakehouse consolidating data from multiple retail companies.
- To ensure scalable and auditable data processing, implemented Medallion Architecture (Bronze/Silver/Gold) with Delta Lake, resulting in ACID-compliant pipelines supporting reliable time travel and incremental processing.
- Needing clean, standardized data for analytics, built PySpark-based ETL workflows for ingestion, cleansing, validation, standardization, and deduplication, resulting in consistent, high-quality datasets ready for downstream use.
- For analytics and BI reporting needs, modeled a Star Schema with fact and dimension tables, resulting in a data model optimized for fast, reliable analytical queries.
- To replicate real enterprise ETL patterns, engineered both historical full-load and Delta Lake-based incremental load strategies, resulting in a pipeline able to handle one-time bulk ingestion and ongoing updates alike.
- To enable governed, self-service reporting, configured Unity Catalog for centralized access control and built Databricks dashboards and Genie Spaces, resulting in natural-language stakeholder reporting without engineering dependency.

YouTube Data Engineering Platform

Python · PySpark · AWS S3 · Glue · Lambda · Athena · Airflow · QuickSight

- Tasked with processing YouTube trending data from multiple sources, designed and built a scalable, cloud-based data engineering platform, resulting in a system capable of multi-source ingestion and analysis.
- To eliminate manual pipeline runs, automated ETL pipelines using AWS Glue, Lambda, PySpark, and Airflow, resulting in fully orchestrated ingestion, transformation, and scheduling without manual intervention.
- For fast, cost-efficient querying, architected a data lake on Amazon S3 with Athena-based analytical querying, resulting in serverless SQL access to processed data.
- When the pipeline hit real-world failures, diagnosed and resolved issues including IAM permission errors, data format mismatches, and API failures, resulting in a reliable, production-stable pipeline end-to-end.
- To make processed data actionable for business users, delivered interactive Amazon QuickSight dashboards, resulting in clear, visual business insights drawn from raw trending data.

Spotify Data Analytics

Python · Pandas · MySQL · SQL · REST API · Matplotlib · Seaborn

- Set out to demonstrate full data-lifecycle skills, built an end-to-end pipeline integrating REST API data, Pandas-based cleaning, MySQL schema design, and SQL analysis, resulting in a complete flow from raw API data to actionable visualizations.

EDUCATION

B.E. Computer Science and Engineering | CGPA: 7.9 / 10 | Nov 2021 – May 2025

Sri Muthukumaran Institute of Technology, Chennai

HSC: 80% | SSLC: 65%

CERTIFICATIONS

- Microsoft Certified: Azure Databricks Data Engineer Associate — Microsoft (Earned Jul 2026, Credential ID A33FDCA4239653AF)
